SOFTWARE MANAGEMENT SYSTEM

SPECIFICATION, CLAIMS AND ABSTRACT AS PRELIMINARILY AMENDED

Amendments to the paragraph beginning at page 1, line 4:

The present invention relates to a software management system comprising a network system which includes a center server and a local server connected to the center server via a wide-area network, such that the center server manages the whole wide-area network. More particularly, the invention relates to a software management system which features an improved function for downloading-the application software from the center server onto the local server maintaining improved reliability.

Amendments to the paragraph beginning at page 1, line 14:

Use of a wide-area network such as internet is ever spreading in recent years. Further, the widespread use of "Java" which is a network-directed program language, is requiring an increased amount of processing for
